

# Master Flash® Low-Profile

Select an appropriate Master Flash® Low Profile with a pipe range that goes below and beyond fitting. If necessary, use the lines clearly shown on the flashing to trim an opening 20-30% smaller than the pipe diameter.

Slide the Master Flash® Low Profile down the pipe, using a non-petroleum-based lubricant to ease installation.

Press Master Flash® Low Profile down, bending it to conform to roof profile or irregularities. A blunt tool will help to form flashing to tight roof angles.

Apply sealant between the base of the flashing and the roof.

Use fasteners to complete sealing. For a secure installation, fastener spacing must not exceed 38mm (1.5").
